A. The curve settles as M grows
empirical − fitted, cumulative
t
M = 30,000
M = 100,000
M = 300,000
M = 600,000
M = 1,000,000
B. Two approximations to the limit
D(t)
t
D(t) at M = 10^6
e^{−bt}(at + ct^2 + dt^3), rms 0.0016
predicted by a two-component mixture
