A. The density, band by band
n ~ 10k
n ~ 50k
n ~ 100k
n ~ 200k
n ~ 300k
n ~ 500k
n ~ 900k
density
t = L(n)/√n
B. Both fits, n ∈ [300,000, 400,000)
exponential, mean 0.334
Weibull, k = 0.948
density
t
C. The shape drifts through 1 and keeps going
k = 1.320 − 0.0290 log n
k = 1, the exponential
crosses at n ≈ 61,864
fitted Weibull shape k
n
D. The empirical hazard turns; a Weibull cannot
Weibull hazard, k = 0.948 (monotone)
hazard f(t)/P(X > t)
t
