A. The curve and two expansions
D(t), the limiting shape
Laguerre, 6 terms
Hermite, 6 terms
F_emp − F_Weibull
t = L(n)/√n
B. Weighted families win
rms residual
10^−3
Laguerre
Hermite
Legendre
Chebyshev
rms of D itself
terms
C. The ratio sweeps 15 simple rationals
c1/c3
Laguerre scale b (all fits within 25% of best)
