A. Where the density misses
B. The same difference, accumulated (its peak is the KS statistic)
histogram − fitted density
empirical − fitted, cumulative
$t = L(n)/\sqrt{n}$
t
$M = 10^{4.0}$
$M = 10^{4.5}$
$M = 10^{5.0}$
$M = 10^{5.5}$
$M = 10^{6.0}$
$\pm 2\sigma$ at $M = 10^6$
